Introduction

Welcome to our Integrated Risk Management Plan (IRMP) Supplement for 2015/17. This supplement outlines what we have done to minimise the impact of the cuts on the people of Merseyside and explains how we have continued to keep the safety of the public and the effectiveness of firefighters as our priority.

Fire and Rescue Authorities are required to produce a medium-term plan that sets out the ways in which it will deal with local risks and challenges. We published our current three-year IRMP in June 2013 and we are using this document to update our stakeholders on the progress we have made against our objectives for 2013/14 and how we intend to deal with any future challenges.

On top of £19.2 million of cuts to our budget between 2011/12 and 2014/15, we are required to make a further £6.3 million of savings by 2016/17, with more cuts expected in 2020. This presents the Authority with significant challenges as it seeks to minimise the impact of these cuts on the levels of service it provides to the public.

Merseyside has seen significant reductions in the total number of incidents over the last decade meaning that the demand for our emergency response has fallen. This is largely due to the success of our fire prevention and protection services (such as Home Fire Safety Checks) particularly focused on those people most at risk of suffering a fire. These interventions require significant resources. All of our firefighters and many non-operational frontline staff carry out these services every day. We have also invested heavily to ensure the safety and effectiveness of our staff, ensuring that they undertake high quality training and are provided with the best equipment to do the job. Despite the reduction in incident volumes, finding the savings isn't easy. To make

savings of this magnitude without having an impact on fire stations and fire appliances is no longer possible, despite continued cuts to "back office" and support services, which includes the staff working to protect people in their own homes.

In previous IRMPs we have introduced the concept of a single Merseyside-wide 10-minute response standard (although the actual average response time is almost half that, from April 2013 to March 2014, at 5 minutes 13 seconds, giving Merseyside one of the fastest response times in the country).

Recent cuts have seen the Authority having to incrementally reduce the number of fire appliances from 42 to 28 over the period and we are, at the time of writing, consulting on proposals to close pairs of outdated stations and, where possible, replace them with one new community fire station in a more central location. Feedback so far suggests that the public, businesses and partner organisations understand our reasons for doing this and are supportive; recognising that we would not be making many of these changes if we were not compelled to do so.

More hard decisions will no doubt follow if the Government continues to cut public spending. So far, we have managed to maintain a very fast response and by targeting our prevention activity and working smarter, we are still having a real impact on the safety of Merseyside.

You can be assured that despite significant challenges we will continue to provide the best possible service to the public of Merseyside.

Chief Fire Officer Dan Stephens,
Chair of the Fire Authority Councillor Dave Hanratty.

Our Mission & Aims

Our Mission; to achieve:

Safer, Stronger Communities — Safe, Effective Firefighters

Our Aims;

Excellent Operational Preparedness

We will provide our firefighters with the training, information, procedures and equipment to ensure they can safely and effectively resolve all emergency incidents.

Excellent Operational Response

We will maintain an excellent emergency response to meet risk across Merseyside with safety and effectiveness at its core.

Excellent Prevention and Protection

We will work with our partners and our community to protect the most vulnerable through targeted local risk reduction interventions and the robust application of our legal powers.

Excellent People

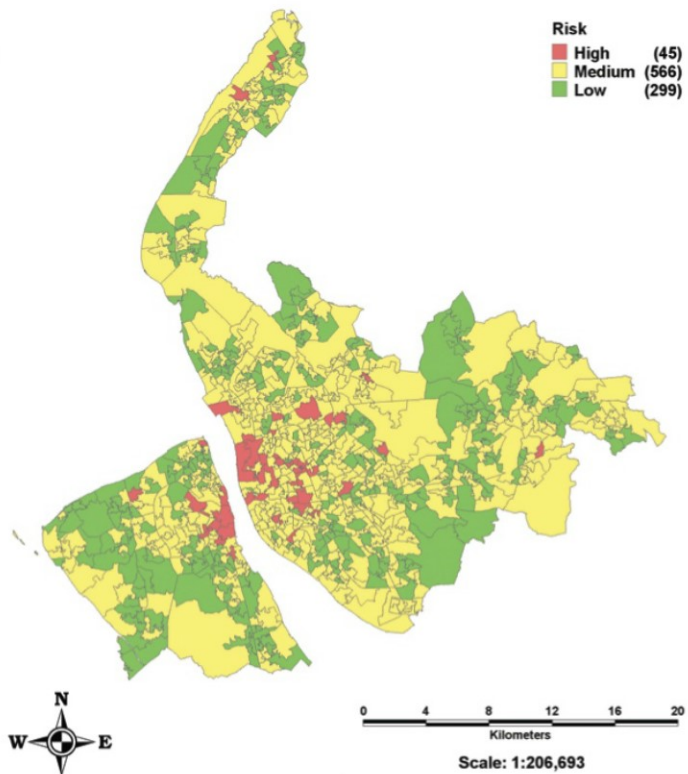

We will develop and value all our employees, respecting diversity, promoting opportunity and equality for all.

Risk Map of Merseyside 2015

The Merseyside Fire and Rescue Authority (MFRA) approach to identifying and reducing risk examines where emergencies occur and the factors that have the greatest impact on risk to life for the people of Merseyside. This allows us to respond efficiently and effectively, where an emergency does occur, and intelligently target the individual needs of our communities.

Maps are created to illustrate the areas where risk factors are most concentrated. The red areas contain some of the most hard to reach and high risk residents of Merseyside. To develop these maps we use data sets including the Indices of Multiple Deprivation, local information from partners who share data with us and historical response data. All this information is collated to produce the Risk Map on this page:

Our Communities

Merseyside has a population of 1.4 million residents and spans 249 square miles (645 Km²) and is made up of five Districts:

- Liverpool
- Wirral
- Sefton
- Knowsley
- St Helens

The map shows where our Fire Stations are currently located (October 2014). Allerton Fire Station (13) will be closed from 1st April 2015 following an Authority decision on 26th February 2015.

Mid-2013, estimated figures showed Merseyside had a population total of 1,386,589, which is a 0.39 % increase on the 2011 Census population. The last Census in 2011 showed the population is split into 48.6% males and 51.4% females. Merseyside has a lower proportion of children (16.5%) and higher proportions of working age residents (66.3%) and older people (17.2%) than the North West averages. (Census 2011)

Ethnicity

(Census 2011 data)

Ethnicity	Merseyside	%
White	1,305,303	94.5%
Mixed	20954	1.6%
Black and Black British	14552	1%
Asian and Asian British	18851	1.4%
Chinese and Other	21529	1.5%
Total	1,381,189	100.00%

Age

Children and people over pension age make up over 34% of the population of Merseyside. (Census 2011)

Age	Merseyside	%
0-14	228,290	16.5%
15-64	915,042	66.3%
65+	237,857	17.2%
Total	1,381,189	100.00%

Our Districts

Wirral	Sefton	Liverpool	St Helens	Knowsley

Our Financial Challenge

Merseyside Fire and Rescue Authority made £19.2 million of savings to deliver a balanced budget between 2011/12 – 2014/15. The major saving required in the frontline service was a reduction of frontline fire engines from 42 to 28.

The Government has now announced the settlement figure for 2015/16. The Authority will need to make savings of £6.3 million to balance the financial plan for 2016/17. To deliver these savings the Authority has prepared a comprehensive plan which will deliver further savings from support staff of £2.9m. This has placed a large number of non-uniformed staff at risk of redundancy. Many of these posts provide front line services to the community, notably within Prevention and Protection.

This still leaves £3.4m of cuts to be identified from front line fire stations. The Chief Fire Officer examined the options for delivering the operational savings required including station mergers, closures, wholetime retained and community retained firefighters and identified station mergers as the "least worst option". Public consultation has endorsed this approach.

The financial plan at the time of setting the budget assumed that it will be possible to save £3.4m, equivalent to about 100 firefighter posts, through at least four station mergers. These included:

- Huyton and Whiston at Prescot.
- Upton and West Kirby at Greasby
- Eccleston and St Helens at St Helens Town Centre.
- A fourth merger in Liverpool District if suitable sites could be identified, or outright closure if not. Subsequently it has not been possible to find a possible merger site in Liverpool.

Based on the current firefighter retirement profile, to deliver that scale of saving will take until 2016. The Authority has always used natural turnover rates from firefighters to make savings and to avoid compulsory redundancy in that part of its workforce.

Looking beyond 2015/16

Based on statements by all the major political parties about their strategies for dealing with the current position of the public finances, it is anticipated that the financial climate will remain very tough for the Authority over the next few years, perhaps as long as to 2020, and further tough choices will be required over the next few years.

Reserves

The Authority has prudently planned to meet financial risks over the medium-term by holding reserves to be used:

- To have money available to give time to deliver savings through natural retirement of firefighters to avoid redundancy.
- As a hedge against pay rises and other risks in the short-term as plans assume pay bill restraint.
- To support capital projects like station mergers to avoid borrowing.
- To manage limited recruitment.

Post 2015/16, balancing competing risks will become more difficult as, the aim is to use much of the reserves for the proposed station mergers project to avoid additional borrowing costs.

Council tax

The Authority has assumed that it will be allowed to increase council tax levels in line with inflation in the next few years and has done so in recent budgets with increases at 2% which was below inflation in those years. The current council tax is £68.70, which is £1.32 per week for a band D household.

How our money is spent

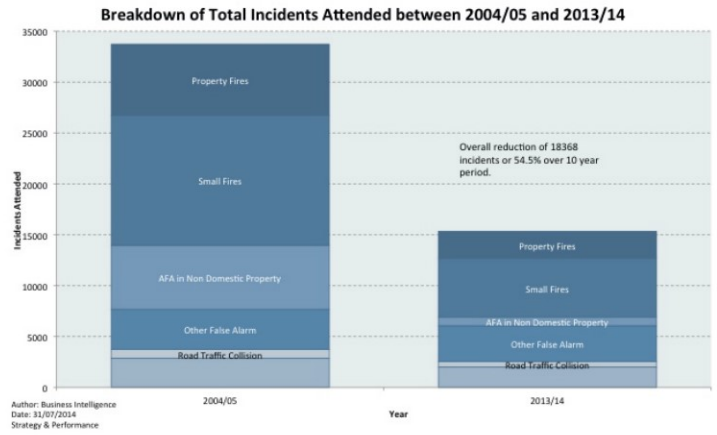

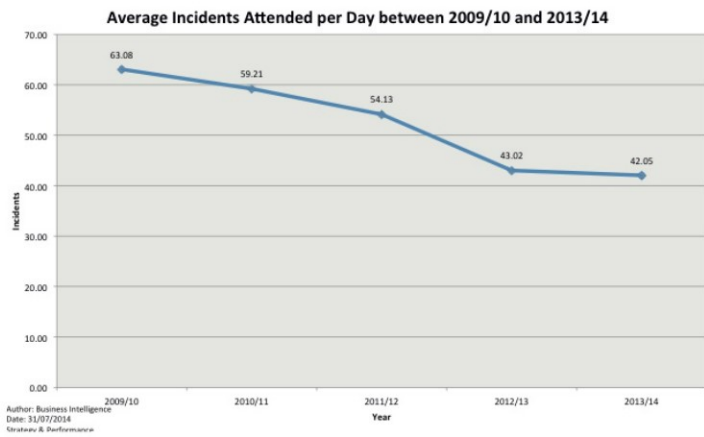

Our Performance

Despite the financial challenges Merseyside Fire and Rescue Authority faces, we are committed to providing the best service possible to the people of Merseyside. Performance in all areas is consistently monitored through Key Performance Indicators (Outcomes) and Local Performance Indicators (Outputs) published in the annual Service Delivery Plan.

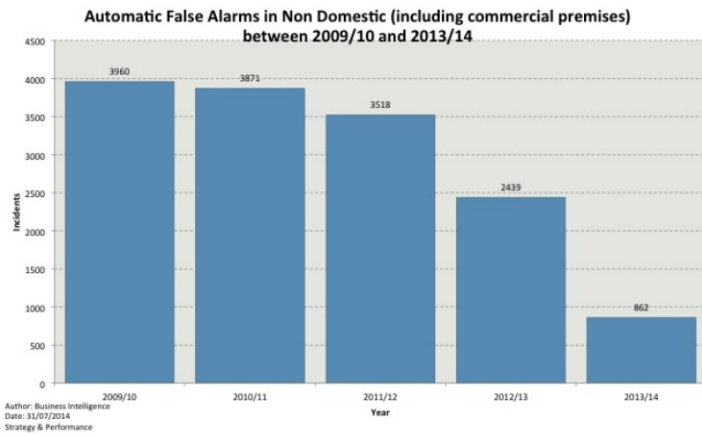

Targets for outcome-related Key Performance Indicators are set using forecasting and historical data to reflect expected improvements to performance.

The following illustrations give a snapshot of MF&RS's performance to the end of March 2014.

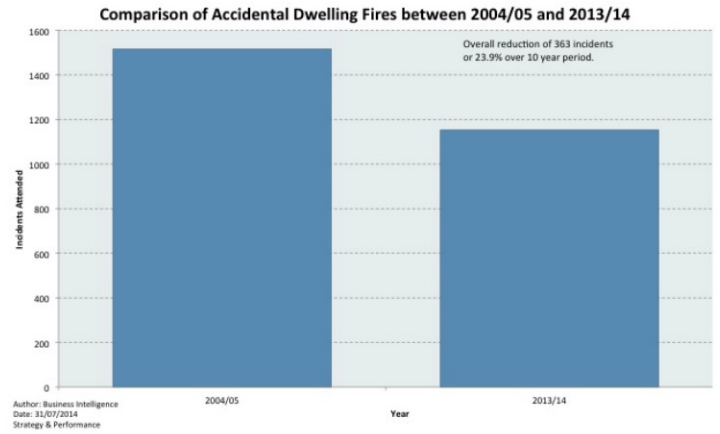

Overall incidents have been reduced by 54.5% over the 10-year period illustrated by the two charts. This is 18,368 incidents less in 2013/14 than in 2004/05. The largest reduction was in small anti-social behaviour fires. In 2004/05, 12,785 small fire incidents were attended but by 2013/14 this had fallen to 5,755 incidents. Our work with partner agencies and the Youth Engagement work we undertake contribute to this massive reduction.

The number of Road Traffic Collisions attended have been reduced from 864 in 2004/05 to 514 in 2013/14. We continue to deliver road safety interventions to schools, colleges and any interested groups to educate residents about driver and pedestrian safety.

The Automatic Fire Alarm Strategy introduced in 2012 changed our approach to attending what we call Unwanted Fire Signals. To introduce this strategy we educated and informed owners of non-domestic properties about management of their fire alarm systems and the impact on our reducing resources when attending false alarms. In 2004/05 we attended 6,284 incidents while in 2013/14 we attended just 824 such incidents.

There were 363 fewer accidental dwelling fires in 2013/14 than in 2004/05. Home Fire Safety Checks have consistently reduced the number of accidental dwelling fires year on year. We continue to deliver this service but in a more targeted way. Through the use of our Vulnerable Person Index we are able to identify those most at risk of fire and deliver appropriate interventions. Reassurance campaigns are delivered to specific areas following incidents.

Excellent Operational Preparedness

Update on IRMP 2013-16 Actions

Standard operational procedures (SOPs) review

This ensures Incident Commanders are provided with flexible local risk specific operational guidance aligned with national operational guidance. Local SOPs are produced to ensure that hazards presented by operational activity are identified and that guidance is available to the Incident Commander on how to control the associated risks and effectively resolve the incident.

Command and control & command competence training

Technical Command Assessment (TCA) applicants now complete an internal command training course prior to undertaking a TCA to ensure they have underpinning incident command knowledge. Command training and development is aligned to National Occupational Standards and the Qualifications & Credit Framework (QCF).

Safe person assessments

The Safe Person Assessments (SPAs) are now fully embedded within MF&RS's assessment framework. Improved performance & efficiency at operational level can be directly linked back to SPAs. The reporting features allow Service Managers to accurately plan and forecast training and assessment in line with the training planner.

High rise & other local infrastructure changes

Our High Rise Project, will ensure any equipment provision and/or procedural requirements are aligned to the overall firefighting media strategy and national guidance.

COMAH

Control of Major Accident Hazards (COMAH) is managed through attendance at the COMAH Metropolitan Fire & Rescue Services Forum, liaison with the Health and Safety Executive, consultation with partners regarding SEVESO III consultation document, COMAH site operators' quarterly forums and work with Network Rail and Merseyrail to develop Introduction to COMAH training packages for rail employees.

Planned developments

MF&RS Operational Planning team use a variety of different methods to identify emerging issues including:

- Liaison with internal departments e.g. Protection— for identification of timber framed buildings.
- Local Resilience Forums e.g. Liverpool Super-Port, National Risk Register, MRF Community Risk Register, MRF Hazards & Risks Sub-Group.
- Quarterly meetings with Merseyrail and Network Rail which have produced rail mapping for the appliance mobile data terminals.
- Links with John Lennon Airport Fire Service and the Civil Aviation Authority.
- Attendance at planning meetings for major events on Merseyside e.g. Open Golf Championships, Giants visit and Southport Air Show.

Equipment

MFRA continually reviews its firefighting tactics, media and equipment to ensure it learns from local and national events and keeps pace with technological innovations. This has included the introduction of:

- New cutting equipment & door rams for faster entry to buildings.
- Piercing branches & wall cutting equipment for suppression of compartment fires prior to firefighter entry.
- Improved Personal Protection Equipment (PPE) including Road Traffic Collision (RTC) gloves, personal issue respirators and fire kit.
- 300 bar cylinders & equipment for new breathing apparatus procedures in line with new guidance.
- New e-draulic heavy cutting/spreading equipment for RTC response.
- New Breathing Apparatus Support Unit vehicle.
- Incident Command and Control Unit.
- A specialist Hazmat Unit (Hazardous Materials Unit).

The Authority continues to provide the highest quality Personal Protection Equipment and operational equipment for its workforce.

Excellent Operational Preparedness Plans for 2015 and Beyond

JESIP—National resilience

The Joint Emergency Services Interoperability Programme (JESIP) ended on 30th September 2014. The JESIP transitional period from 1st October 2014 to March 2015 resulted in a programme report. The transition has been divided into a number of key workstreams: Doctrine, Training, Testing & Exercising and Joint Organisational Learning which will shape the legacy of JESIP.

From 1st April 2015, the JESIP legacy will commence and move from the Home Office to Cabinet Office and be supported by the Civil Contingencies Secretariat. Recommendations from the transition team will shape the JESIP legacy and there will continue to be a strategic board and ministerial oversight of JESIP. Work will continue with emergency services and Local Resilience Forums throughout transition and legacy arrangements to embed JESIP into business as usual activities.

A key branding change from 1st October is that JESIP will be known as Joint Emergency Services Interoperability Principles.

Emergency services mobile communications programme

The Emergency Services Mobile Communications Programme (ESMCP) is a cross-governmental programme to deliver mobile voice and data communications to the emergency services based on a review of the anticipated operational demands, technical opportunities and commercial options. The service delivered will be known as Emergency Services Network (ESN).

The Fire and Rescue Service (FRS) aspects of the programme, including fire control and vehicle installation, data preparation, systems integration and migration planning, form part of the ongoing activities whose timescales and funding mechanisms have yet to be agreed by the Home Office. The system will potentially be the framework for FRS communications through to 2030 and beyond. Transition to the new service is expected to begin late 2016. The transition period for Merseyside Fire & Rescue Service (MF&RS) will begin late 2017.

Hazard and risk control training

Hazard and risk control knowledge and understanding will be embedded within internal incident command input and training aligned to the guidance contained within the Health, Safety and Welfare Framework.

Command & control / command competence training

In alignment to the Qualifications Credit Framework (QCF), a programme of informative and assessable exercises will be provided to ensure incident command in all roles and levels is quality assured. Consistent and uniform assessment criteria for training and developmental purposes will be adopted.

Safe person assessments (SPAs)

Building on the success of the initial 20 SPAs, we aim to provide additional assessments aligned to core training and risk critical activity. These will include Gas Tight Suits & Defibrillators. The enhanced level of reports will allow the training teams to analyse performance across the Service and react to the needs of the organisation. The software developed in house will also offer analysis across all core training courses.

High rise & other local infrastructure changes

Preliminary research is being undertaken with a view to providing a high rise training rig at the Training and Development Academy in order to provide realistic training experiences.

MF&RS is constantly horizon scanning to identify new and future risks. At present we are aware of the High Speed 2 (HS2) rail link and the impact of increased rail traffic on Merseyside. We will identify training venues for operational personnel to utilise simulated rail incidents for familiarisation with rail procedures and interoperability with rail personnel.

Resilience

National resilience capabilities

Following the terrorist attacks in the USA on 11th September 2001, the Government of the day initiated the New Dimensions programme in order to improve national response arrangements to deal with similar events here in the UK.

The New Dimensions programme has resulted in the delivery of the Urban Search and Rescue (USAR), Chemical, Biological, Radiological, Nuclear and Conventional Explosive (CBRN (E)), High Volume Pumping (HVP) and Command and Control (C&C) capabilities. All of these capabilities are provided primarily for use at national incidents through separate funding and support arrangements from the Department for Communities and Local Government (DCLG).

Merseyside Fire & Rescue Service hosts a USAR team including two search dogs and handler, an Incident Response Unit for Mass Decontamination and a Detection, Identification and Monitoring (DIM) vehicle, which make up the CBRN (E) capability, and a HVP. Whilst these assets are provided primarily for national deployment they are all utilised locally to enhance our response to incidents.

USAR and NWS hazardous area response team (HART) station - Croxteth

The MF&RS Urban Search and Rescue (USAR) team and the North West Ambulance Service's (NWS) Liverpool Hazardous Area Response Team (HART) are co-located at Croxteth Community Fire Station in the only arrangement of its kind in the country.

The operational response to technical rescue incidents is significantly enhanced through this arrangement as the personnel from each team work and train together using the facilities at the Training and Development Academy, which is situated adjacent to the station.

JESIP—National resilience

The Joint Emergency Services Interoperability Programme (JESIP) was established to address the recommendations and findings from a number of major incident inquiries. The initial phase of the Programme ran from September 2012 to September 2014 with the aim of improving the ways in which police, fire and rescue and ambulance services work together at major and complex incidents.

This has been achieved through joint training and exercising and through the adoption of Joint Doctrine. Merseyside Fire & Rescue Service officers supported the initial JESIP roll out and are now an integral aspect of the legacy arrangements which will serve to embed the JESIP principles as core business across the three emergency services.

Joint command and control centre (JCC)

The Merseyside Fire & Rescue Service Fire Control and Merseyside Police "999" call handling and dispatch capabilities are co-located on the ground floor of the JCC at the Merseyside Fire & Rescue Service Headquarters.

The first floor of the JCC hosts the Merseyside Fire & Rescue Service Operational Planning and Policy Team and the Merseyside Police Force Operations Department. It also hosts the strategic and tactical command suites from which all major incidents and events occurring on Merseyside are managed.

Excellent Operational Response

Update on IRMP 2013-16 Actions

New work routine

On 3rd January 2014 the duration of a firefighter's shifts were equalised in a move from 9-hour days and 15-hour nights to 12-hour days and nights. The new equalised shifts required a change to start and finish times. The duty system remains unchanged as a compressed hours system based upon two days and two nights worked consecutively, followed by four consecutive days off.

In conjunction with the shift change we introduced a new work routine for our firefighters that would maintain performance with fewer resources. The new work routine has reduced stand down time and increased the number of productive hours in the working day by six hours per firefighter for each 48-hour period or tour of duty. The work routine includes one hour per shift for physical training for station-based operational personnel.

Reduction in the number of appliances

Following the fundamental review of fire cover undertaken by the Chief Fire Officer, on 9th September 2013 the number of immediately available fire appliances was reduced from 42 to 28. This was a 33% cut.

10-minute response time

The introduction of the 10-minute response standard commenced in April 2013. Performance has been very high with an average of 97% achievement of the standard over the period. Where attendance times are not met these instances are reviewed by the relevant District Manager to improve performance or mitigate future occurrence.

Replace dynamic reserve with strategic resilience

The Authority has endeavoured to introduce wholetime retained strategic resilience appliances. In order to encourage staff to volunteer to undertake

these roles, retained contracts have been advertised to staff at a higher remuneration rate and less hours cover required than that stipulated in Firefighter's National Conditions of Service. Unfortunately, staff uptake has been very poor and not at the level required to implement this change. The Authority continues to explore ways of implementing wholetime retained crewing.

Key station methodology

Ten key stations have been identified that form the basis of our tactical cover model for our control room. By ensuring all 10 stations have an appliance in their station ground, MFRA can meet its 10-minute response standard.

New fire stations and fire appliances

MFRA opened the last of the seven new Private Finance Initiative (PFI) stations in 2013. The stations boast state-of-the-art facilities for our staff and for the community, making them true community fire stations which are accessible to all. The Fire Appliance Replacement Strategy means that our fire appliances are replaced every ten years to ensure they are fit for purpose and reflect improvements in safety and innovation.

Station mergers

No fire stations had been closed until the Fire Authority decision, on 26th February 2015, to close Allerton Fire Station. The remaining 25 stations are staffed with at least one fire engine although this position is becoming increasingly difficult to maintain due to the cuts applied and the resulting Authority decision to transition from 26 stations to 22 stations through mergers or outright closures (subject to consultation).

Excellent Operational Response Plans for 2015 and Beyond

Shift pattern changes

Due to further financial pressures new, more efficient shift patterns and duty systems will continue to be considered. Whilst firefighter safety and productivity was increased by the changes made to the existing working patterns (two days, two nights), a more efficient and effective shift system model may be able to increase safety and productivity further.

Non-operational duty systems

We will review non-operational duty/shift patterns to ensure ways of working complement frontline service delivery and maximise the benefits of increased productivity delivered by changes to the default operational duty pattern.

New ways of crewing appliances

Wholetime and community retained crewing will continue to be investigated as a way of providing additional resilience to supplement our whole-time workforce.

Additional voluntary hours (AVH)

The Service will continue to review its plans with regard to staffing in order to provide the most efficient and effective emergency response in Merseyside.

Flexi officer duty system review

The current Officers flexi duty system will be subject to a risk assessment to ensure an appropriate number of operational officers available 24/7 for attending incidents; whilst ensuring we are maximising the managerial hours available in the workplace.

Develop & implement a comprehensive fatigue risk management system (FRMS)

Following the realignment of shift times and the review of the work routines, the Authority will ensure that arrangements are in place to manage the risk presented to operational firefighters from fatigue in the workplace and review welfare at incidents if appliances have to remain in attendance longer due to less appliances being available.

To carry out a review of the current fire ground analytical risk assessment (ARA) process

We will ensure our ARA process fully meets the requirements of the Fire and Rescue Service Framework and can be fully cross mapped to the outcomes of the Operational Procedure review. We will aim to develop a suitable ICT solution and methodology for this activity.

Command and control at incidents

We are reviewing the provision of Command Support to Incident Commanders. The Incident Management Team will be relocated to Toxteth fire station and move to a more efficient complimentary crewed system. To ensure we improve our Command Support resilience, we will train identified support stations in addition to Toxteth.

Station mergers

Following consultation, the Authority has approved a proposal to merge two fire stations in Knowsley (Huyton and Whiston) into one newly built, strategically situated site in Prescot. Merger options are also being progressed in Wirral and St Helens, subject to public consultation. The merger solution is less viable in Liverpool, where the Authority, following 12 weeks of public consultation, reluctantly decided to close Allerton Fire Station from 1st April 2015 and may have to consider further station closures.

Excellent Prevention and Protection

Update on IRMP 2013-16 Actions

Restructure of prevention & protection team

The Prevention teams have been restructured at a District Level and at Service Headquarters. The restructure categorises Prevention into four key areas:

- Home Safety.
- Road Safety.
- Arson/Anti-Social Behaviour (ASB).
- Children and Young People (CYP).

District-based teams have been restructured and given the objective of reducing high levels of risk in homes and communities.

Managing risk

Each policy for Prevention and Protection focuses on a risk-based methodology which is being applied to ensure that front line resources are operating effectively in places and with people that are most vulnerable. This is reflected in the use of our Vulnerable Person Index to target risk in the home, based on factors we know make people more vulnerable to fire, and the introduction of the Risk Based Fire Protection Inspection Programme (Legislative Fire Safety).

Intelligence-led targeting

Information from partner agencies continues to be shared with the Service which allows us to identify those people who are most at risk from fire. We feed this information into our Vulnerable Person Index which produces anonymised lists of addresses for our fire crews to target for Home Fire Safety Check (HFSC) delivery. Information sharing

agreements are in place with a number of agencies including local councils and the NHS. District Managers are active on a number of local partnership boards. The Deputy Chief Fire Officer sits on the Liverpool Health and Wellbeing Board. MFRA recognises the broader role it has in relation to health and wellbeing and is committed to extend its role in Health over the life of this plan.

Health

It is acknowledged that a healthy community is a safer community and by understanding and tackling the wider social determinants of health and health inequality, we can contribute to the creation of safer, stronger communities.

RTC strategy

MF&RS are now embedded in road safety partnerships across Merseyside and nationally including the Chief Fire Officers Association (CFOA), BRAKE and Road Safety GB. Education and engagement has been agreed with local authorities and developed in schools and colleges through the delivery of our "Suddenly from Nowhere" package, and national campaigns such as the CFOA's Road Safety Week are supported in full within each district. We are delivering Road Safety education to all MF&RS staff.

Enhance youth engagement programmes

Our Youth Engagement teams continue to deliver the Prince's Trust Team programme for young people, with additional, more cost effective delivery models being piloted in partnership at more venues. Merseyside has some of the most successful course retention rates for young people in the region.

The highly successful Beacon Project, which focuses on helping 13-16-year-olds to develop life skills and enhance team working as an alternative to the school curriculum, relies solely on external funding. We continue to work with public and private sector partners to fund such opportunities for our young people – particularly those at risk of exclusion from school.

Protection

The revised Fire Protection Policy has been published following consultation, supported by the Risk Based Inspection Programme which aims to target risk and offer support to the business community. The Policy incorporates the changes in legislation including the Primary Authority Scheme for Fire Protection, where individual Fire and Rescue Authorities lead on fire protection matters for specific commercial organisations.

Unwanted fire signals

The Authority has now fully embedded the Risk-Based Strategy for responding to Unwanted Fire Signals, which are false alarms from Automatic Fire Alarm systems. This has resulted in a reduction of over 70% in the activations of fire alarms that we class as unwanted.

Excellent Prevention and Protection Plans for 2015 and Beyond

Home safety - vulnerable people and places

The Home Safety Strategy is being refreshed to enhance capacity and engage with more people who are vulnerable in their homes, with a particular focus on those residents who are over 65. Officers continue to develop data sharing protocols with partner agencies and referral pathways so operational staff, specialist advocates and volunteers can carry out targeted interventions to reduce risk in the home. We feed this information into our Vulnerable Person Index which produces anonymised lists of addresses for staff to target for Home Fire Safety Check delivery. Consideration is being given to collaborative partnerships to enhance our capacity to carry out interventions in the home.

Management Information Systems are being developed to support the intelligence-led approach to targeting risk and delivering positive outcomes for our communities (associated with the Service's Key Performance Indicators).

The 20/20 vision for Prevention and Protection will include a review of working arrangements with partners such as Fire Support Network and the Fire Fit Hub and consider collaborative partnerships that enhance the management of risk and focus on the safety of the most vulnerable.

Road safety

MF&RS will develop the Road Safety Strategy to include delivery of road safety education to Year 7 pupils in Liverpool, a new MF&RS motorcycle road safety approach and roadshows with our partners using the new MF&RS Road Safety Vehicle. We will link nationally with the Chief Fire Officers Association to standardise and support their Road Safety Strategy.

Children and young people (CYP)

Our Youth Engagement teams will continue to deliver the Prince's Trust (PT) programmes. MF&RS have been commissioned to deliver a refreshed Beacon Project tailored to suit the needs of the young people and national funding has been secured to expand the provision of Fire Cadets across each District of the county. The strategy for CYP engagement in Merseyside will be reviewed to consider the future delivery of existing programmes and a review of interventions for young fire setters, activity carried out by operational staff and safeguarding.

Arson/anti-social behaviour

MF&RS continue to establish more premises as Safe Havens and will continue to seek funding for frontline interventions to reduce anti-social behaviour. District-based advocate provision will be aligned to Merseyside Police structures to ensure the impact of partnership working is maximised. We will develop and build on the success of site specific and seasonal campaigns to minimise the effect of anti-social behaviour and arson in the community.

Protection

The Protection Team will be restructured to reflect the National Competency Framework for Business Safety Regulators and will consider future efficiencies in that restructure.

A new Management Information System for Protection will be purchased to support business safety across the county. We will continue to work with commercial partners to develop the Primary Authority Scheme.

Unwanted fire signals

Protection officers are working collaboratively with businesses to further reduce the impact of false alarms caused by unwanted fire signals and we continue to develop our approach to unwanted fire signals to best deliver our services.

High rise strategy

The Authority has provided capital funding to support local authorities in providing sprinklers in high rise blocks of flats, aimed at reducing risk to occupants and firefighters in those premises. The publicity campaign including the Sprinkler Symposium has been completed and applications for funding to deliver sprinkler projects have been received and will be assessed on a risk basis. The programme will be delivered into and beyond 2015.

Excellent People

Update on IRMP 2013-16 Actions

Firefighter fitness policy

The appointment of a Fitness and Rehabilitation Co-ordinator to work in conjunction with Occupational Health and the District Management Teams has proved to be a successful asset, addressing and resolving a number of fitness issues and ensuring an earlier return to operational duties for a number of staff. The introduction of specific training time within the new work routine has been supported by this role, alongside the creation of operational training programmes.

Other duties personnel have been assigned to meaningful work projects whilst working with Occupational Health and the Fitness Advisors to ensure a return to operational duties as soon as possible. The Authority is in the process of changing the current Absence Procedure, introducing a specific Capability Procedure which will be embodied within the suite of policies to address sickness absence and support individual attendance at work.

Staff survey

The Authority undertook a "Your Service, Your Voice" staff survey in 2014 to better understand the needs and aspirations of its staff and to use it as a springboard for continuous organisational improvement. An action plan is being produced, at the time of writing, to respond to the comments made, in order to maximise the levels of engagement across the Service.

Support service review

The Service has used voluntary severance and natural staff turnover to manage the necessary reductions in the number of support service roles in order to protect frontline services and avoid the need for compulsory redundancies as part of the last Support Service Review. All roles have been reviewed as part of this process to ensure that only essential activities are delivered. A further review of the support services is planned in 2014/15.

Change management

The Authority has adopted a set of Organisational Values that are embedded across the Service and underpin all that we do. They are an integral part of our current development strategy and future recruitment and promotion for all staff. The introduction of the Development Gateway for all uniformed roles provides accredited development, coaching and mentoring for those employees seeking progression within the Service and is aligned to core and command competency.

Support staff review 2013/15

The Support Services Review 2013/15 has been completed, having delivered the required savings figure. Implementation of department and role redesign, natural wastage, and voluntary severance/early retirement initiatives has taken place with the support of the representative bodies and without the need for any compulsory redundancies.

Excellent People Plans for 2015 And Beyond

Working with the representative bodies (e.g. trade unions), we will explore all options to ensure the most efficient systems of work continue to deliver a high quality service to the communities of Merseyside. This will explore the development of national conditions of service including the design and delivery of unique local work routines and reward structures that deliver the efficiencies required by the Government's Spending Review in conjunction with an engaged and productive workforce.

Recruitment

The Authority intends to recruit over the period 2015-17 to ensure that it is able to meet the challenges faced by the Service now and in the future. This is only achievable through the development of a competent and engaged workforce. The Workforce Strategy will incorporate flexible recruitment and leadership development.

Absence management

The Authority is implementing a capability procedure to replace the absence and attendance procedure. The new procedure will allow local management of sickness absence that will be supplemented by a range of occupational health initiatives, management advice and guidance and early interventions to support all employees in their attendance at work.

Productivity

In conjunction with the representative bodies, the Authority will introduce new ways of working, utilising revised working practices and contractual stipulations. The Authority will use national and local reward structures to address the extreme financial restrictions placed on the Authority whilst attempting to retain continuity of service delivery and employee engagement.

Change management

The Authority will continue to utilise and support the reduced resources it has to ensure optimum output and service delivery. The revised shift and work routine will continue to be supported by a range of training and development opportunities. Full implementation of a Development Gateway process will offer those employees who wish to seek development or career advancement that opportunity, and assess their potential transparently against the organisational values and operational expertise. This ensures we are staffed by motivated employees who share the same organisational values.

Redundancy

To date the Service has reduced its employee numbers to address the budgetary reduction placed on the Authority through natural wastage and voluntary severance/early retirement. We will address future staffing reductions endeavouring to avoid compulsory redundancy. However, the options are severely limited and it is unlikely this can be guaranteed in the future. A review of strategy and practices will address staffing change whilst fully supporting those staff involved in any further redundancy situation.

Support staff review 2015-17

The Authority will use the previous strategy to review its support structures and seek the required savings. A set of criteria will ensure all roles are evaluated and decisions made based on the continued growth of the Service within the parameters of the financial restrictions placed on it. Assessment will be based on the future requirement of services, how they can be delivered either locally, collaboratively or externally, as well as the implications if roles are no longer undertaken.

Medium-Term Strategy 2012-17

Our Medium-Term Strategy covers a five-year period and we will review our performance against this strategy on an annual basis. The aim of our strategy is to ensure that our Action Plans are focused on the achievement of our Mission;

Safer, Stronger Communities - Safe, Effective Firefighters

The IRMP Medium-Term Strategy for the development of Merseyside Fire & Rescue Service is:

Objective 1

To reduce accidental dwelling fires and the deaths and injuries which result from these fires in Merseyside.

Action: To analyse our performance on an annual basis using the Performance Indicators (PI) which relate to fire deaths, injuries and accidental dwelling fires. We will introduce measures as necessary to ensure the reduction in all figures.

Target: We will reduce accidental fires in homes and the deaths and injuries they cause on Merseyside by 5% by 2017.

Current Progress 2013/14: *While the number of accidental dwelling fires is within 10% of the target, sadly injuries and fatalities have increased. We are working more intelligently to target the most vulnerable people in Merseyside through targeted Home Fire Safety Checks to reach those most in need of our help.*

Objective 2

To achieve an appropriate speed and weight of attack in emergency response to fires and road traffic collisions.

Action: To analyse our performance against our emergency response standards and to introduce standards and measures as necessary to improve performance.

Target: To achieve a 90% attainment level against our response standards to all life risk incidents.

Current Progress 2013/14: *We reduced the number of appliances from 32 to 28 and, following consultation, introduced a 10-minute response standard for all emergency incidents. On average we are attending emergency incidents in 5.13 minutes. We are monitoring appliances booking mobile to incidents within 1.9 minutes of being alerted. On average we are achieving this target on 92.2% of occasions. This is closely monitored by District Teams.*

Objective 3

To reduce fires caused by anti-social behaviour in those areas of Merseyside identified as most at risk.

Action: To analyse risk to ensure we target our intervention activity to reduce anti-social behaviour in those areas where risk is highest across Merseyside.

Target: To reduce anti-social behaviour fires by 5% by 2017.

Current Progress 2013/14: *We have continued to make improvements in relation to this objective. In particular, the way in which we work with partners has brought us excellent results over the bonfire period, with incidents reducing by 50%.*

Objective 4

To reduce the impact of fire on commercial enterprise and the wider community.

Action: We aim to use all available resources to ensure we minimise the risk to commercial property from accidental and deliberate fires and to help affected businesses recover to normality as soon as possible.

Target: To reduce fires in commercial premises by 5% by 2017.

Current Progress 2013/14: *Deliberate and accidental fire in non-domestic premises are below target. We have continued to work closely with local businesses to reduce these incidents.*

Objective 5

To reinforce our role in fire prevention by improving fire safety within the public and commercial buildings of Merseyside.

Action: We will work with all businesses and stakeholders to educate and inform the business community about their responsibilities for fire safety in the workplace and to protect the public to ensure compliance with the requirements of the Regulatory Reform Order (Fire Safety) 2004.

Target: We will improve regulatory compliance rates by 5% by 2017.

Current Progress 2013/14: *Our risk based approach to meeting our legislative fire safety duties and responsibilities will assist us in continuing the improvement to Objective 4.*

Objective 6

To ensure that the operational workforce operate safely and effectively in the resolution of all emergency incidents.

Action: We will continue a programme for assessment of competence which reflects the evolving risks facing the Fire and Rescue Service in Merseyside and nationally and assess all staff within the operational workforce.

Target: We will assess the operational workforce across all areas of generic risk annually by 2013 and beyond.

Current Progress 2013/14: *We continue to assess operational personnel through the use of operational monitoring during incidents and through a structured audit of station training, which is on-going through the year. Any areas of improvement or best practice are actioned through the Operational Improvement Group.*

Objective 7

To ensure that we can respond safely and effectively to all emergency incidents locally, regionally and nationally.

Action: We will maintain a programme to test operational plans and procedures using internal and multi-agency exercises.

Target: We will test the effectiveness of all operational plans and procedures annually by 2014 and beyond.

Current Progress 2013/14: *We have reviewed and exercised against Operational Plans which will continue with our multi-agency partners against risks identified within the National Risk Assessment (NRA), the Merseyside Resilience Forum (MRF), Community Risk Register (CRR) and site specific risks.*

Equality Objectives 2012-17

Equality Objective 1

In the past ten years Merseyside Fire & Rescue Service has reduced accidental fires in the home by 37%.

Action: We will continue to build on this work through the use of our customer insight (Vulnerable Person Index) modelling and our station planning process to target individuals at risk.

Target: To reduce accidental fires in the home and the deaths and injuries they cause on Merseyside by a further 5% by 2017.

How this impacts on Equality and Diversity: Protected Characteristic – Age and Disability: We know through extensive research that some of the people at highest risk from fire are also covered by the nine protected characteristics that form part of the Equality Act 2010, for example elderly and disabled people. Our activity focuses on reducing risk for vulnerable people.

Current Progress

At the end of 2013/14, the Equality and Diversity target for Accidental Dwelling Fires (fires in the home) has been narrowly missed by 20 incidents (2%). High levels of accidental dwelling fires during the first three quarters of the year have contributed to missing the target of 1,136. A review of the Home Fire Safety Strategy will take into account this Equality & Diversity objective. This includes working to target our Home Fire Safety Checks (HFSCs) at the most vulnerable people in our communities.

Equality Objective 2

We will reduce risk for people who live in rented properties across Merseyside.

Action: By continuing to build productive relationships with Registered Social Landlords.

Target: To cut accidental kitchen fires in social housing by 5% by 2017.

How this impacts on Equality and Diversity: Protected Characteristics – Age and Disability, Socio-Economic Disadvantage: We know that people who live in rented properties often have other needs and fall within the protected characteristics. We've worked well with Registered Social Landlords to protect their residents, but some of the higher risk people live in privately rented accommodation and we want to help them too.

Current Progress

At the end of 2013/14 there were a total of 219 accidental fires in properties owned by registered social landlords, and the Equality & Diversity target of 237 has been met.

Equality Objective 3

We will continue to engage with young people in vulnerable areas.

Action: Through our award winning youth engagement programmes.

Target: Reducing deliberate anti-social behaviour fire setting by 5% by 2017.

How this impacts on Equality and Diversity: Protected Characteristics – Age, Socio-Economic Disadvantage: The anti-social behaviour of a minority of young people can impact most on the elderly and on other young people too. We want to help young people become good role models for others in their area and help older people feel safer in their homes.

Current progress

For the second year running, MFRA have achieved the Equality & Diversity target of 5,767 incidents, current incidents are down to 512, 640 incidents less than the target.

Equality Objective 4

We will work with at-risk groups and local partners to contribute to the reduction in the number and severity of road traffic collisions across Merseyside.

Action: To work towards achieving the local target of reducing the number of people killed or seriously injured in road traffic collisions.

Target: Reducing the number of people killed or seriously injured in road traffic collisions by 37.5% by 2020, as set out by the United Nations.

How this impacts on Equality and Diversity:

Protected Characteristic – Age: Young people are at a particularly high risk of being killed or seriously injured in road traffic collisions. We want to have a positive impact on this group and help to keep them safer on the roads, whilst also monitoring road traffic collision risks in relation to young and old across all five districts and responding accordingly.

Current progress

The target in relation to road traffic collisions has been achieved for the third year running. However, the number of injuries was 97 over the target. We are currently delivering a programme of engagement with schools, presenting our “Suddenly from Nowhere” education package. We also work with all the young people we come into contact with through Prince’s Trust and Beacon Project programmes to instil road safety messages.

Equality Objective 5

Our aim is to create a strong cohesive organisation which is positive about rising to the future challenges we face.

Action: Our aim is to increase the representation of all minority groups within the communities of Merseyside in the Fire and Rescue Service.

Target: To increase the diversity of our workforce and volunteers to reflect the local community we serve.

How this impacts on Equality and Diversity: Protected Characteristic

– Gender and Ethnic Origin: We’d like our workforce to better represent the make-up of our communities and we will work to encourage applications from under-represented groups when we carry out any recruitment.

Current progress

No uniformed recruitment has taken place during the reporting period but a Positive Action recruitment programme has since taken place.

Our workforce (both uniformed and non-uniformed) equality analysis shows that there has been a 1% change in our gender split since last year, with 1% more females working at MFRA than last year, making a whole workforce split of 79% Male and 21% females.

MFRA are committed to tackling inequality, tailoring our services to meet the needs of our diverse communities and treating our staff and service users fairly.

The MFRA Equality & Diversity Report 2013/14 can be found on our website www.merseyfire.gov.uk
